## In the Claims:

Please amend claims 1, 3 and 4 as follows:

1. (Currently Amended) An air circuit for a breast-pump that produces bidirectional or intermittent air pressure and at least one express kit that requires either bidirectional or intermittent air pressure and unidirectional negative air pressure and vacuum,
the express kit having a breast cup, a liner in the breast cup and a milk collection device, the
liner and breast cup forming a pulsation chamber that receives the air pressure, the liner and
breast forming a vacuum chamber that receives the vacuum, the air circuit comprising:

an inlet for connection to the breast-pump;

aat least one first output producing providing from the inlet a bidirectional or intermittent air pressure output for the pulsation chamber; and

and least one second output providing producing from the inlet a unidirectional vacuum for the vacuum chamber.

- 2. (Original) The air circuit of claim 1, comprising a one-way valve that converts the air pressure of the pump into the vacuum of the second output.
- 3. (Currently Amended) The air circuit of claim 1, comprising a pressure releasecheck valve that exhausts positive pressure as needed.

P.06

- The air circuit of claim 1, comprising a 4. (Currently Amended) vacuum adjustmentcontrol valve.
- The air circuit of claim 1, comprising a filter in the inlet, 5. (Original) for preventing contamination.
- (Original) 6. The air circuit of claim 1, comprising a filter in the second output.
  - 7. (Original) The air circuit of claim 1, comprising two express kits.
